

RECURRING FAILURE PATTERN

Confirmation 2

silent failure,
every week

CONFIDENCE

8 / 10

3 consecutive Fridays in May — same symptom, different MK slots. Issue marked 'Still Ongoing' since May 8 — never fully resolved.

INCIDENT TIMELINE

- Apr 1 (W14)**  Conf 2 templates error
- Apr 15 (W16)**   Reschedule link + partial conf 2 failure
- Apr 24–26 (W17)**      EXPLOSION — conf 2 silent all day, lobby links dead
- May 8 (W19)**  Conf 2 not sent — marked Still Ongoing
- May 15–22 (W20–21)**   Conf 2 fails whole day — 2 consecutive Fridays

3 consecutive Fridays (May 8, 15, 22) — same failure, never patched

Systematic weekly regression, not a one-time bug

RECOMMENDED ACTIONS

NOW

Dead-man's switch

Auto-check 60–90 min before each MK slot; alert + manual queue if Conf2 missing

WEEK 1

Root cause audit

Find which slot IDs (MK 15, MK 20) trigger it — likely cron/mapping bug

WEEK 2

Fallback channel

TCM-side alert shows which leads have no Conf2 when bot fails
